TOUR STATUS AND ARE CHEPORT

FORTY-SIXTH REPORT OF THE GOVERNMENT STATISTICIAN ON THE VITAL STATISTICS OF QUEENSLAND.

TO THE UNDER SECRETARY, HOME DEPARTMENT.

SIR,-I have the honour to submit my report on the Vital Statistics of Queensland for the year 1905. Owing to the rearrangement of the statistical staff instituted two years ago, I have been compelled for 1904, and on this occasion, to postpone the issue of this report to a later period of the year than formerly, in order to give precedence to general statistical information, and see no way to avoid doing so,

although aware that this pr ceeding causes inconvenience in some directions.

The experience of Queensland in relation to vital statistics for 1905 was not satisfactory, the births were fewer and the deaths more numerous than in 1904, whilst the migration, chiefly due to the exodus of Pacific Islanders, was against the State. These circumstances were in part compensated for by an increase in the number of marriages. The low marriage rates of 1903 and 1904 were reflected in the small number of births recorded last year, whilst the larger number of deaths was due to the wide-spread epidemic of malaria, chiefly classed as dengue.

POPULATION.

In framing the estimates of population certain percentage additions in terms of Schedule A of VII. Edward, No. 11 of 1905 (Commonwealth) are required to be made to the oversea departures and to the borderwise migration of both kinds by train to allow for the arrivals and departures of those who are presumed to escape record. These proportional additions were determined at the Statistical Conference held at Melbourne in September, 1903, and no doubt at that time the proposed adjustments were calculated to reduce in a practical way the tendency to over-estimate the populations of the several States, although differences of opinion might exist as to whether they dealt with the real causes of the error. At the present time, however, I believe that the additions to the oversea departures to some extent operate unfairly to Queensland, as there is a considerable exodus of coloured aliens in progress, and these departures are most accurately counted, and yet in common with all departures a 10 per cent. addition is made to them.

There were 528,048 persons comprised in the estimated population at the end of 1905.

total population 290,206 were males and 237,842 females.

The details upon which this estimate is framed are furnished in the following table:—

				Excess.					
A Carlos	Males.	Females.	Persons.	Males.	Females.	Persons.	Males.	Females.	Persons.
Estimated Population on 1st January, 1905	1,723 891	1,731 523	3,454 1,414				287,799	233,856	521,655

Estimated Population on 3st December, 1905							290,206	237,842	528,048
				1		-)		1

^{*} Including allowance for unrecorded arrivals.

The first three quarters of the year showed increases to the population aggregating 6,810, but in the fourth quarter a decrease of 417 is recorded, leaving an increase for the year of 6,393. The last quarter of each year invariably either shows a decrease or at least a very reduced increase; the large number of persons who leave Queensland at that period for trips to the southern States causing this result. The natural increase amounted to 8,123, of which 3,479 were males and 4,644 were females. The net results of migration with the aggregate adjustment for the purpose of framing population estimates showed a deficiency of 1,730. If from these figures be deducted excess of coloured alien departures, 1,414, and the net allowance made on coloured alien departures, 233, in terms of Statistical Conference, then the excess of European departures for 1905 would amount to 83 only, for it may certainly be claimed that coloured alien departures should be exempted from such allowance—as there are certainly few if any omissions in these—as such arrivals and departures are subjected to a special individual count.

The centesimal increase of population for Queensland last year was 1.23, which is below that of any Australasian State except Victoria and Tasmania.

		Aa.			
Queensland	•••	 1.23	Western Australia	 	5.16
New South Wales		 2.36	Tasmania	 	0.50
Victoria		 0.68	New Zealand	 • • •	2.91
South Australia		1.48			

The greatest proportionate increase was in Western Australia, 5:16 per cent., followed by New Zealand, 2:91, and New South Wales, 2:36.

The estimated populations of each State on the 31st December, 1905, were as follow:-

Ab.

State.		Estimated Po	opulation, 31st De	ecember, 1905.		of each se x in he Population.	Proportion per cent- of the Population of each Federal State
		Males.	Females.	Persons.	Males.	Females.	to the total Population of the Commonwealth.
Queensland		290,206	237,842	528,048	54.96	45.04	13.02
New South Wales		794,400	701,650	1,496,050	53.10	46.90	36.88

South Australia		197,487	180,721	378,208	52.22	47.78	9.32
Western Australia		150,495	104,284	254,779	59.07	40.93	6.28
Tasmania		93,466	87,639	181,105	51.61	48:39	4:46
Total Commonwealth		2,135,728	1,921,033	4,056,761	52· 65	47:35	100.00
New Zealand		467,366	415,096	882,462	52.96	47.04	
Total Australasia	•••	2,603,094	2,336,129	4,939,223	52.70	47:30	

The population of the Commonwealth was 4,056,761, and, with New Zealand added, approximated very closely to 5,000,000 persons. Of the total population of the Commonwealth Queensland contributes 13 per cent., New South Wales 37, and Victoria 30, the two latter between them thus containing upwards of two-thirds of the entire number. The sex ratios are very diverse, varying from only 41 females to each 100 of the population in Western Australia to 49.97 in Victoria. In Queensland the proportion was 45. The females in this State were at the end of 1905 in the proportion of 82 to each 100 males. The ratios at the end of each quinquennial period since 1875 were as follow:—

				Ac.				
				Males to each 100 Persons.		Females to each 100 Persons.		Females to each 100 Males.
1880	 	 		58.71		41.29		70.32
1885	 	 		58.91		41.09	•••	69.75
1890	 	 	•••	56.93		43.07	•••	75.65
1895	 	 		56.27	2000	43.73	D.,, c	77.71
1900	 	 		55.63	•••	44.37		79.77
1905	 	 		54.96		45.04	C	81.96

At the present time there are 12 more females to each 100 males than there were in 1880.

A study of the ratios of population increase in Queensland since Separation and of the proportion of such increase which has been contributed by excess of births over deaths must lead to the

conclusion that population must be drawn from beyond the State if past progress is to continue or even be maintained. The following table furnishes in detail information on this point for each year since 1862:—

Note.—* Figures adjusted after actual population ascertained by census.

| Including allowances for unrecorded arrivals and departures.

[‡] Decrease due to census adjustment.

⁻ Excess of departures.

A reference to columns 7 and 12 discloses the relation between natural increase and migration as contributories to the population accessions. A consideration of the question is facilitated by the following statement:—

Ae.

Increase by	Exce	ess of Arriva	als over Dep	partures.	Increase by E	xcess of Birt	hs over Deaths.
Year.		Males.	Females.	Persons.	Males.	Females.	Persons.
1876 to 1880		23,384	10,914	34,298	7,960	12,291	20,251
1881 to 1885		57,200	31,414	88,614	7,987	15,261	23,248
1886 to 1890		36,111	22,138	58,249	17,872	24,238	42,110
1891 to 1895		11,361	3,692	15,053	20,525	25,757	46,282
1896 to 1900		14,968	5,294	20,262	17,724	24,037	41,761
1901 to 1905		-*1,311 -	-*4,345	*5,656	16,628	22,910	39,538

⁻ Excess of departures.

Not only has the migration flow been against Queensland during the past five years, but the natural increase has been much reduced in ratio as compared with previous quinquennums. The former point is, of course, to some extent discounted when it is borne in mind that considerable numbers have at each Census been written off the estimates of population based on these figures. This, it is anticipated, will not be necessary for the current intercensal period, as the arbitrary additions to departures year by year already referred to are designed to attain the same result, and must, undoubtedly, bring the resulting estimated population closer to the enumerated figures at the next Census.

During the twenty-five years 1876-1900, 87,261 were written off estimated populations as a result of Census corrections.

Migration.

Full details of immigration and emigration, as returned by the Customs and Railway authorities, are recorded at Tables Nos. I. and II. in the Appendix of this report; of these the following statement is a summary:—

B.

		Adults.			Childr	en, 1 to 12	years.		Infants.		Total.

Excess of Arrivals of — Departures	or }	89	-193	104	-106	65	- 41	— 19	- 28	- 47	— 36	-156	-192

This is one of the weakest points in connection with statistical collections. It seems impossible, notwithstanding the greatest care and attention, to secure reliable figures on this head. There were 40,232 persons—27,480 males and 12,752 females—recorded as arriving in this State during 1905, and 40.424—of whom 27,516 were males and 12,908 were females—recorded as departing therefrom, or an excess of 192 departures. Of the arrivals, 36,742 were adults, and of the departures 36,846, or percentages of 91 in each case. Of the total passenger traffic, 94 per cent. is with the other States of the Commonwealth, and of this particulars are furnished in the following table:—

Ba.

Grand	Total		 5,935	3,478	381	269	574	386	17,712	8,302	24,602	12,435			

Rather less than two-thirds of the total passenger traffic with the south is conducted by rail.

Bb. 1896. 1897. 1898 1899. 1900. 1901. 1902. 1903. 1904. 1905. 35.54 40.59 36.85 38.28 48.30 53.87 50.78 52.47 64.53 62.18

Ten years ago 36 per cent. went by rail and 64 by sea; now the positions are nearly reversed. As already pointed out, the departure of coloured aliens has, during 1905, mainly contributed to the loss of population by excess of emigration.

There were 1,323 persons of this class who arrived during 1905, and 2,737 who departed, an excess of the latter of 1,414. The following table gives further particulars:—

		Arrivals.				Departures		Excess.		
			Arrivais,			Departures	•	Arrivals.	Departures	
Race.	1]				1			
		Males.	Females.	Persons,	les.	Females	Persons.	sons	rsons.	
		Ma	Fer	Per	Males	Fer	Per	Pers	Per	
Chinese		312	5	317	612	8	620	Pappul	303	
Pacific Islanders		134	6	140	1,050	70	1,120		980	
Japanese		123	4	127	190	17	207		80	
Natives of India and Ceylon (coloured)		182		182	199		199		17	
Other Asiatic Races		554	3	557	566	25	591		34	
Total		1,305	18	1,323	2,617	120	2,737		1,414	

It will be seen that 140 Pacific Islanders entered Queensland during last year. Practically all of these came from New South Wales, a few individual members of ships' crews entering by Northern ports. Departures of this race numbered 1,120, whilst 303 more Chinese and 80 more Japanese left the State than entered it.

Coloured Alien Population.

The population of coloured aliens, as estimated to the 31st December, is shown in the following table :-

Ca.

ESTIMATED NUMBER and PROPORTION of MALES, FEMALES, and PERSONS of COLOURED ALIEN RACE in the POPULATION of QUEENSLAND on the 31st December, 1905.

	T50,08 181,01E01.81	Males.	Females.	Persons.	Percentage to Total Estimated Population.
Estimate	ed Chinese Population	8,698	590	9,288	1.76
"	Pacific Islanders Population	6,251	504	6,755	1.28
,,	Japanese Population	1,883	134	2,017	0.38
"	Population of Coloured Natives of India and Ceylon	918	21	939	0.18
"	Other Asiatic Population	1,784	250	2,034	0.38
,,	Population of all other Nationalities	270,672	236,343	507,015	96.02
	Total Estimated Population of the State	290,206	237,842	528,048	100.00

Thus, 96 per cent. of the population is of European extraction, and 1.76 per cent. Chinese, 1.28 Pacific Islanders, and 0.94 per cent. "Other Asiatics." The gradual elimination of this element of the population can be seen from the following table:—

		Cb.			
	Census.	Estimated 31st December.	Estimated 31st December.	Estimated 31st December.	Estimated 31st December.
	1891.	1902.	1903.	1904.	1905.
Chinese	2.18	2.00	1.95	1.85	1.76
Pacific Islanders	2:39	1.73	1.66	1.21	1.28
Other Asiatics	0.47	1.01	0.98	0.99	0.94
European Extraction	94.96	95.26	95.41	95.65	96.02
					-
	100.00	100.00	100.00	100.00	100.00

The Pacific Island question is now, of course, a thing of the past, and Chinese, the only other race at all numerous, are on the decrease.

POPULATION IN FINANCIAL DIVISIONS.

For administrative purposes it is the practice to formulate an estimate of the population of the three areas, recognised as the great financial divisions of the State. The figures are approximate only, as they are based on the ratios to the total population found to obtain at the last Census.

						1	D.			
							Northern Division.	Central Division.	Southern Division.	Total State.
Populat	tion, Census	1901-	_							
Nu	ımber—									
	Males					•••	70,145	36,343	173,604	280,092
	Females			000	•••		40,812	27,576	154,786	223,174
	Persons	•••	•••	•••	•••		110,957	63,919	328,390	503,266
Pro	portion, per	r cent.								
	Males to t			•••			25.04	12.98	61.98	100.00
	Females to	o total	Female	s			18.29	12.35	69.36	100.00
Estimat	ed Population	on, 31s	st Decer	nber, 1	905—					
	Males						72,667	37,669	179,870	290,206
	Females		•••	•••	•••	• • •	43,501	29,374	164,967	237,842
	Total Pers	sons	•••	•••		•••	116,168	67,043	344,837	528,048

Of the total population of 528,048 persons 116,168, or 22 per cent., are estimated as in the Northern division; 67,043, or 13 per cent., in the Central; and 344,837, or 65 per cent., in the South.

Population, Metropolitan Area.

The difficulties of framing population estimates are intensified when the latter relate to restricted areas, and an arithmetical calculation on the basis of Census enumeration data would be quite misleading. Through the kind assistance of the town clerks of local authorities, comprising the metropolis, fairly reliable estimates are practicable for that area, and the results appear in the following table:—

Da.			
THE THE PARTY OF T	Males.	Females.	Persons.
City of Brisbane	19,060	19,031	38,091
City of South Brisbane	14,763	15,754	30,517
Brisbane Registry District	33,823	34,785	68,608
Outside Registry District, but Within Ten-mile Rad		30,710	61,128
Brisbane Metropolitan Area (Ten-mile Rad	ius) 64,241	65,495	129,736

The population of greater Brisbane (10 miles) was, on 31st December, 1905, estimated at 129,736, with a slightly preponderating number of females. The city of Brisbane comprised 38,091 of these, and the city of South Brisbane 30,517, altogether rather more than half the total number.

Mean Population.

This is determined by dividing the sum of the means of the populations at the beginning and end of each quarter by four. The estimated mean population for 1905 was—

Males.	Females.	Persons.	
289.462	236,266	525,728	

ix.

Federal Effective Population.

This is the population upon which is computed the representation permissible to each State in the Federal House of Representatives in terms of the Commonwealth Constitution Act. The following table contains full information on this point:

Db.

					Effective		Quotient ar	nd Remainder.	Number of Rep	resentatives.	
8	tate.				Population 11th December, 1905.	Quota.	Quotient.	Remainder.	Number as per Quota.	Statutory Number.	
Queensland	.41				506,935		9	6,571	9	9	
New South Wales					1,483,393		26	37,897	27	27	
Victoria		•••		•••	1,214,098		21	46,582	22	22	
South Australia	•••				372,768	55,596	6	39,192	7	7	
Western Australia	• • •	•••	• • •		247,072		4	24,688	4	5	
Tasmania					178,627		3	11,839	3	5	
Commonwealt	th				4,002,893				0 0 0	75	

Thus as the House of Representatives consists of 75 members, New South Wales absorbs 36.00 per cent. of the total representation, Victoria 29.33 per cent., Queensland 12.00 per cent., South Australia 9.33 per cent., Western Australia and Tasmania 6.67 per cent. each, Queensland's small remainder of 6,571 will require to be largely augmented to secure another representative for this State.

MARRIAGES.

Full particulars respecting the number of marriages registered in each district can be ascertained at Table No. VIII. in the Appendix. For the whole State the registrations for 1905 numbered 3,173 against 3,078 in the previous year, or an increase of 95. Of the 1905 registrations 816 were in the first quarter, 756 in the second, 801 in the third, and 800 in the fourth. The following table shows the number recorded in each district in which 100 or more were celebrated:—

District.	Number.	District.		Number.
Brisbane	616	Bundaberg	 	127
Kennedy	203	Townsville	 	120
Drayton and Toowoomba	. 166	Moreton West	 	115
Rockhampton	128	Cairns	 	100

Marriage Rate.

In 1894, and again in 1903, the low-water mark of marriage ratios to date was reached when on each occasion there were only 5.7 marriages to each 1,000 of the mean population. After the first-named date the proportion rose gradually until 6.9 was attained in 1900, again to decline during the three following years, rising in 1904 and 1905 to 5.9 and 6.04 respectively. The marriage ratio for each year since the inauguration of registration is shown in the following table:—

Ea.

Year.	Number of Marriages per 1,000 mean Population.	Year.	Number of Marriages per 1,000 mean Population.	Year.	Number of Marriages per 1,000 mean Population
1857	8.2	1874	8.6	1891	7.1
1858	9.4	1875	8.6	1892	6.7
1859	9.3	1876	7.6	1893	5.9
1860	10.8	1877	7.6	1894	5.7
1861	10.2	1878	7.0	1895	6.2
1862	14:4	1879	7.5	1896	6.1
1863	14:5	1880	7.0	1897	6.0
1864	14.0	1881	7.7	1898	6.0
1865	13.3	1882	8.6	1899	6.8
1866	11.6	1883	8.9	1900	6.9
1867	9.5	1884	8.9	1901	6.6
1868	8.3	1885	8.9	1902	6.3
1869	8.3	1886	8.3	1903	5.7
1870	7.8	1887	8.2	1904	5.9
1871	8.1	1888	8.7	1905	6.04
1872	8.7	1889	7.9		
1873	9.6	1890	7.8		A STATE OF THE PARTY OF THE PAR

In earlier years, when the population comprised a larger proportion of young adult life, high marriage rates obtained; but, as the conditions assumed more normal proportions, a reduction in the relative number of marriages was inevitable. In Western Australia, where young adults are still in greater proportion than in the Eastern States, the ratio of marriages is higher. The marriage rates for 1905 in each State were as follow:—

		Eb.					
	1901.	1902.		1903.		1904.	1905.
Queensland	 6.61	 6.31		5.72		5.93	 6.04
New South Wales	 7.68	 7.53		6.86		7.21	 7.42
Victoria	 6.99	 7.02		6.29		6.80	 7.24
South Australia	 6.38	 6.55		6.21		6.85	 6.94
Western Australia	 9.66	 9.77		9.33		8.83	 8.48
Tasmania	 7.71	 7.47		7.57		7.55	 7.61
New Zealand	 7.83	 8.01	•••	8.23	•••	8.26	 8.28

The rate for Western Australia is rapidly becoming assimilated to that of the other States. On the other hand New Zealand records show an ascending ratio, probably in response to material prosperity.

Marriages by Denominations.

The following table shows the number of marriages celebrated by each of the more important religious bodies for each of the past ten years:—

Denomination.	od woż	 1896.	1897.	1898.	1899.	1900.	1901.	1902.	1903.	1904.	1905.	Total Ten Years
Church of England		 720	787	794	904	910	921	883	741	789	779	8,228
Roman Catholic Church		 593	617	595	722	689	678	645	589	619	616	6,363
Methodist		 494	473	486	570	536	570	523	476	521	607	5,256
Presbyterian		 406	419	437	553	469	439	445	441	444	427	4,480
Baptist		 130	146	143	151	154	150	156	158	157	158	1,503
Lutheran		 110	126	137	148	144	145	130	130	139	136	1,345
Congregational		 112	87	79	122	139	104	122	104	104	107	1,080
Salvation Army		 18	24	25	24	28	24	16	9	21	15	204
Other Christian Sects		 20	15	30	46	59	75	93	84	124	139	685
Hebrew		 	1	1	2	5	2		1	1	1	14
By Registrars and Marrying	Justices	 220	199	245	207	238	233	230	200	159	188	2,119
Totals		 2,823	2,894	2,972	3,449	3,371	3,341	3,243	2,933	3,078	3,173	31,277

The last column gives the aggregate number for the decade of marriages performed by ministers of each denomination, and from these figures may be readily deduced the average annual number and comparisons made with the figures of any year. Of the first seven denominations, four showed decreases for 1905 on the average for the ten years—Church of England, 44; Roman Catholic Church, 20; Presbyterian, 21; and Congregational, 1. The following three showed increases:—Methodist, 81; Baptist, 8; and Lutheran, 1.

The ratios of adherents of the different churches to the total population and the ratios of marriages

by their respective ministers to the total marriages show wide divergence.

Fa.

		Proport	ion per cent. ea	ch Denomination to	o total—
			Population. Census, 1901.		Marriages, 1905.
Church of England	 	 	36.76		24.55
Roman Catholic Church	 	 	23.98		19.41
Methodist Church	 	 	9.25		19.13
Presbyterian Church	 ,	 	11.45		13.46
Lutheran Church	 	 	5.07	•••	4.29
Baptist Church	 	 	2.43		4.98
Congregational Church	 	 	1.94	•••	3.37

Thus Church of England members comprised 37 per cent. of the population, but ministers of that church celebrated only 25 per cent. of all marriages. Roman Catholics numbered 24 in each 100 of the population, but only contributed through their own church 19 per cent. of the marriages. On the other hand, for the following churches the ratios were—Methodist, 9 per cent. of the population, 19 per cent. of the marriages; and Presbyterians, 11 per cent. of the population, 13 per cent. of marriages. Further particulars on the subject of marriages by the several denominations can be ascertained by reference to Table No. IX. in the Appendix.

Birthplaces of Persons Married.

A reference to Appendix Table No. X. will furnish full information on this head. So large a proportion of parties to marriage are natives of the State, that the question of birthplace possesses less significance than was formerly the case. Out of 3,173 men married, 1,707, or 54 per cent.—of the same

number of women, 2,200, or 69 per cent—were born in Queensland, giving a percentage of both on persons married of 62 per cent. The following table shows the growth of native-born element as regards marriage during the past thirty years:—

G.1875. 1880. 1885. 1890. 1900. 1905.
7·20 13·77 19·63 25·98 49·38 61·57

The next largest contributories were natives of England and Wales, 529 husbands and 359 wives claiming these countries as their birthplace; followed by New South Wales, 276 men, 183 women; Ireland, 157 and 126; and Scotland, 135 and 86.

Age and Conjugal Condition of Persons Married.

Table XI. in the Appendix details very fully ages of husbands and wives. Of husbands, the youngest was one of 17, married to a girl of the same age, and 6 one year older; the most advanced age recorded was 68, 4 having married at that age. Of wives, there were 14 children who had not yet reached their sixteenth birthday, 2 of them being under 15 years of age. The oldest was a bride of 63. Of cases of disparity with respect to age, the husband being the elder, men of 56 and 64 respectively married girls of 22 and 24, whilst on the other hand men of 22 and 29 married women of 43 and 51. An analysis of the Appendix table referred to is given in the following statement:—

H.

	Totals			 	3,173	94	39	66	96	139	236	255	266	269	261	1,452

One man out of 8 marries a wife older than himself and 1 in every 14 marries a wife of the same age; whilst of youths below 21 years of age, 1 out of every 2 marries an older woman, and 1 out of 4 a girl of the same age.

The mean age at marriage remains remarkably constant, with, however, a slightly upward tendency; but with respect to all marriages rather than first ones.

			Ha.			
			All Husbands.	Bachelors.	All Wives.	Spinsters.
1881-1885,	Average	of Means	 28.22		23.29	
1886-1890,	,,	22 22	 97.59	•••	23.23	
1891-1895,	22	22 22	 28.38	• • •	23.69	
1896-1900,	11	"	 28.91	27.79	24.22	23.22
1901			 29.31	28 28	24.57	23.47
1902			 29.05	27.98	24.57	23.48
1903			 29.26	28.15	24.48	23.37
1904			 29.06	27.92	24.28	23.24
1905			 29.06	28.03	24.23	23.39

It will be observed that the difference between the mean age for all marriages and for first marriages is about one year only, being in this respect the same for either sex. The mean age for husbands being 29 and for bachelors 28 years. For wives, 24 years; and for spinsters, 23 years.

The numbers and the mean ages of persons of different conjugal conditions married during 1905

are shown in the following table:-

Hb.

					1905.

Divorced Women		 	5	0.16		31.40
TOTAL PERSONS MARRIED	 	 	6,346	200.00	29.06	24.23

Of the 3,173 men married 2,958, or 93 per cent., were bachelors, of whom 2,827 married spinsters, 126 were married to widows. Widowers remarried numbered 212, and 150 of them selected spinsters for their consorts and 62 of them widows. Spinsters numbered 2,980, or 94 per cent. of all wives. Of persons married in 1905, the mean age of bachelors was 28 years, of spinsters 23 years, of widowers 43 years, and of widows 37 years. There were three divorced men and five divorced women remarried during that year, and although there is no direct connection between the number of divorced persons remarried and of divorces granted, inasmuch as the divorces may not have been granted in this State, yet it is not unreasonable to assume that over a prolonged period there would be some relation between them; the following statement may, therefore, be of interest:—

Hc.

		1896.	1897.	1898.	1899.	1900.	1901.	1902.	1903.	1904.	1905.
Dissolutions	 	3	6	7	10	12	14	6	8	13	4
Marriage of Divorcees	 	8	3	7	13	15	21	14	12	9	8

In the ten years shown there were 83 dissolutions granted in the State, equal to 166 divorced persons, whilst during the same period 110 persons described themselves on their marriage certificates as having been divorced. It is, of course, quite possible that some persons otherwise described were really divorcees.

Signature of Marriage by Mark.

Education of an elementary character is now so universal that the number of marksmen and markswomen who thus sign the marriage certificate possesses little significance. The following table provides information on this point for the last thirty years:—

	Number of Persons in each Year who signed Marriage Certificate with a Mark.							Marriages	3.	Persons Married.		
Year.		Males.	II II IVI	Females.		i	Males.	ragainti	Females.		Persons.	
1875		135		267			9.08		17.96		13.52	
1880		90		187			5.82	•••	12.09		8.95	
1885		107		209			3.76	•••	7.35		5.56	
1890		94		115			2.94	811.00 112-	3.60	•••	3.27	
1895		82		76			2.90		2.69	•••	2.80	
1900		58	•••	88			1.72		2.61		2.17	
1905		44		44			1.39		1.39		1.39	

One person out of each 72 were unable to sign their marriage certificate last year, whilst thirty years ago 1 person out of 7 were in the same position.

BIRTHS.

The substantial revival in the number of births recorded, which took place in 1904, was not continued last year; the registrations being fewer than in any year of the decade, except 1903, numbering 13,626, of whom 7,134 were males, and 6,948 were females. In 1904 there were 14,082 births recorded, so that last year's figures showed a decrease of 456. The number of births with the increase for ten years is shown in the following table:—

			J.		
		Increase or —Decrease on			Increase or —Decrease on
		Previous Year.			Previous Year.
Year.	Births.	Numerical. Centesimal.	Year.	Births.	Numerical. Centesimal.
1896	14,017	8575.76	1901	14,303	4983:36
1897	14,313	296 2.11	1902	14,216	870.61
1898	13,933	—380—2.65	1903	12,621	-1,595 -11.22
1899	13,899	340.24	1904	14,082	1,461 11.58
1900	14,801	902 6.49	1905	13,626	4563.24

In 1904 there was a numerical increase of 1,461, so that the registrations for 1905 are still more than a thousand in excess of those for 1903.

Full particulars can be obtained respecting the registration of births from tables in the Appendix; a summary of these is contained in the following statement:—

Ja.Births, 1904 and 1905.

Totals	7,134	6,948	14,082	6,978	6,648	13,626	-456	97:39	95.27

Details are here furnished respecting all districts in which the number of birth registrations in 1905 exceeded 250. The largest increase—37—was at Toowoomba, and the biggest decrease—40—at Townsville. Other decreases were—Nundah, 39; Moreton West, 35; Logan, 34; Enoggera, 31; Kennedy, 31; and Mount Morgan, 23. These, it will be noted, comprise impartially, suburban, farming, and mining areas.

There was an unusually large proportion of male births in 1905, females numbering 2·12 in each 100 fewer than in 1904. Amongst any considerable number of births, males almost invariably predominate. Last year, however, at Bundaberg, where 389 registrations took place, females were in the proportion of 119 to 100 males. Other districts specified in the above table, in which females were in excess, were Maryborough 114 to each 100; Townsville, Gympie, and Logan with considerably smaller ratios. The proportion of female to male births in the State for each of the past ten years is given in the following table:—

		les born to o					les born to 0 males bo	
1896	 	 97.81		1901		 	96.44	
1897	 	96.69		1902		 	95.30	
1898	 	 00 101		1903		 	96.37	
1899	 	 94.99		1904			97.39	
1900	 	 94.78		1905	***	 	95.27	

The ratio for 1905 was—with the exception of those for 1899, 94.99, and 1900, 94.78—the lowest for any year of the decade.

Birth Rate.

The decreasing birth rate not only in Queensland but throughout Australia and, indeed, further afield is a much debated question. Whilst the causes and the effects may both afford room for a diversity of opinion, of the fact itself there can be no question. Not only is the marriage rate declining but the

fertility of marriage itself is decreasing; both these causes tending to a diminution in the relative number of births. Cause and effect so react on one another that at times conclusions, based on apparently the most logical deductions, may be at fault. Some argue that the diminished birth rate may be, and is, partially at least, counterbalanced by a decrease in the number of deaths, the latter being due to the better conditions obtaining with respect to hygiene and to the advance in medical knowledge. Even this being admitted may it not in turn react on the birth rate by securing a greater survival of the unfit, who would otherwise be eliminated. The following table shows the birth rate at quinquennial periods since 1860:—

				K.			
1860	 47.9	1880	 36.9	1900	 30.2	1904	 27.1
1865	 43.6	1885	 36.7	1901	 28.3	1905	 25.9
1870	 43.5	1890	 37.2	1902	 27.7		
1875	 37.5	1895	 32.8	1903	 24.6		

The ratios of births to population recorded in the earlier years of this State's history, when extremes of age were numerically few in number, cannot be looked for as these conditions pass away, and, whatever the cause, any considerable increase in the relative number of births seems improbable.

At present the proportion of births to population is adversely influenced by the number of coloured aliens comprised in the population. These numbered 21,852 souls, but yet contributed only 90 births to the registers, as shown by the following table:—

			Ka.			
			Males.	Females.		Persons.
Chinese		 	22	 19		41
Pacific Islanders		 	11	 10	•••	21
Japanese	•••	 . 1 .		 1	•••	1
Natives of India			2	 • • •		2
Other Asiatics	• • •	 	19	 6		25
Totals		 	54	36		90

These figures give a birth rate of 4 per 1,000 only, and if these disturbing elements be eliminated from birth-rate calculations, the ratio of births for Europeans is found to be nearly 1 per 1,000 better than the general rate.

					K	b.			
Year.				Birth	Rate Pro	oper.		oured	on the basis of excluding Aliens from the calcu-
1896		•••			30.06		 	 	31.23

1904					27.12		 	 	28.12
1905			•••		25.92		 	 	26.86

The birth rate for each State of the Commonwealth is as follows: -

Kc.													
		Birth Rate, 1901.	Birth Rate, 1902.	Birth Rate, 1903.	Birth Rate, 1904.	Birth Rate, 1905.	Average of the rates for the quinquennial period.						
Queensland		28.28	27.68	24.62	27.12	25.92	26.72						
New South Wales		27.60	27.17	25.28	26.73	26.72	26 70						
Victoria		25.78	25.23	24.46	24.65	24 83	24.99						
South Australia		25.16	24.60	23.24	24.70	23 66	24.27						
Western Australia		30.32	30.09	30.27	30.34	30:30	30.26						
Tasmania		28.40	28.95	28.61	29 59	29:32	28.97						
New Zealand		26.34	25.89	26.61	26.94	27.22	26.60						

Taking the 1905 rate for the seven States of Australasia, it is seen that the Queensland birth rate was exceeded by those for Western Australia, Tasmania, New Zealand, and New South Wales, whist above those for Victoria and South Australia. Western Australia was the only State with a birth rate exceeding 30. There the age condition of the population is further from normal than in any other State, the proportion of young adults being excessive. The rate for the United Kingdom for 1905 was 27:12, the lowest yet recorded.

An approximate estimate of the number of children to each marriage can be formulated by dividing the number of legitimate births by the number of marriages of the previous year. On this basis there would appear in recent years to be, on an average, 4 children to each marriage. This is below the experience of from ten to fifteen years ago, as may be seen from the following statement:—

			Kd.			
1890	 	4.69		1902	 	4.00
1895	 	5.65		1903	 	3.63
1900	 	4.02		1904	 	4.47
1901	 	3.99		1905	 	4.12

The number of children born to each 1,000 females of child-bearing age is, however, a surer test as to the decadence of fecundity. The following table supplies figures bearing on this question:—

Ke.

	FEMALES 15 YEARS TO 45 YEARS OF AGE.			BIR	THS.	BIRTHS PER 1,000.				
Cens		Married.	Unmarried.	Legitimate.	Illegitimate.	Legitimate Births to Married Females 15 years to 45 years of age.	Illegitimate Births to Unmarried Females 15 years to 45 years of age.	Total Births to all Females 15 years to 45 years of age.		
1861		5,	788					245.85		
1871		15,502	6,830	5,074	131	327:31	19.18	233.07		
1881		24,178	15,441	7,875	345	325.71	22.34	207.48		
1891		44,537	34,607	14,031	684	315.04	19.76	185.93		
1901		53,617	50,561	13,455	848	250.95	16.77	137.29		

Information on this point is only available, of course, for Census years, when the numbers alive at each age are definitely ascertainable.

This table covers a period of forty years, but is unfortunately complete for the last thirty of them only. From the sixth column it will be seen that during the ten years 1891-1901, the decrease in the number of children was very pronounced.

Illegitimate Births.

Out of 13,626 births recorded during 1905, 950 were illegitimate. Of these 488 were males, and 462 females. The numbers registered during each quarter of the year were as follow:—

			I.			
				Males.	Females.	Persons.
First Quarter		 		124	 125	 249
Second Quarter		 		113	 107	 220
Third Quarter		 		143	 127	 270
Fourth Quarter		 		108	 103	 211
					-	-
· T	otal	 		488	 462	 950

The ratio of bastardy in Qucensland is a high one.

			La			
1896	 5.22	1900		6.40	1903	 6.79
1897	 6.02	1901		5.93	1904	 6.90
1898	 6.04	1902		6.04	1905	 6.97
1899	5.97					

The records of each year of the last decade fail to furnish any evidence of improvement. The ratios of the last three years each approximate very closely to 7 per cent. This is in excess of any State except New South Wales.

	Lb.		
	Per Cent. to Total Births.		Per Cent. to Total Births.
Queensland	6.97	Western Australia	4.19
New South Wales	7:37	Tasmania	5.52
Victoria	5.61	New Zealand	4:57
South Australia	4:35		

Western Australia, South [Australia, and New Zealand all contributed less than 5 per cent. of illegitimacy to the total births, the ratios, respectively, being 4·19, 4·35, and 4·57.

Twins, Triplets, &c.

There were 120 cases of multiple confinement during 1905. One hundred and nineteen of them comprised twin births, and one case of triplets.

The following statement gives further particulars respecting the twins:—

		Lc.		Males.	Females.
First Quarter	 		 	31	33
Second Quarter	 		 	22	30
Third Quarter	 		 	31	35
Fourth Quarter	 		 	30	26
				114	124

DEATHS.

There were only 5,503 deaths registered during 1905, of whom 3,499 were males and 2,004 were females. This is a little in excess of the number for 1904, but below that for every other year of the decade except 1897. The number of deaths and the death rates of each of the past ten years were as follow :-

													DEA.	rhs.		
	YEAR.								Total Number. Proportion of Tot Deaths per 1,000 of N Population.			of Mean				
											Males.	Females.	Persons.	Males.	Females.	Persons
396 397 398 399 900 901 903 904									 	 	3,574 3,483 3,771 3,943 3,678 3,838 3,924 3,951 3,259 3,499	2,071 1,940 2,472 2,201 2,069 2,169 2,280 2,395 1,991 2,004	5,645 5,423 6,243 6,144 5,747 6,007 6,204 6,346 5,250 5,503	13·65 13·00 13·66 13·80 13·45 13·62 13·74 13·92 11·36 12·09	10·13 9·22 11·42 9·87 9·54 9·68 10·00 10·46 8·57 8·48	12·10 11·33 12·67 12·07 11·72 11·88 12·08 12·38 10·11 10·47

The death rate—i.e., the number in relation to each 1,000 of the population—was, both for persons and for males, the lowest, except for 1904, for any year of the decennium—namely, 10 47 and 12 09 respectively; whilst for females even 1904 proved no exception. In the year 1898—the one of the ten with the greatest relative mortality—the female death rate was 11 42, against 8 48 last year.

It has already been pointed out that the coloured alien population is hostile to the birth rate, not contributing to the births at all in proportion to their numbers; unfortunately, they prove equally inimical to the death rate from exactly an opposite cause, the deaths amongst them being excessive. The deaths and death rates amongst coloured aliens and Europeans for 1905 were as follow:

	Estimated	Number of	
	Mean Population.	Deaths.	Death Rate.
Chinese	9,468	99	10.46
Pacific Islanders	. 7,317	164	22.41

	(manufacture)	Constantinued	CONTRACTORISM
All Persons	. 525,728	5,503	10.47

Comprising a population of 21,852 persons, they contributed 314 deaths to the total record, a rate per 1,000 of 14:37, or 40 per cent. in excess of that of the European population, although not having to carry any appreciable infant mortality, as they consist almost entirely of adults.

The death rate for each State of the Commonwealth is shown in the following table:—

Mb.

	Rate in	Rate in	Rate in	Rate in	Rate in	Average of the Rates for the Quin-	5
	1901.	1902.	1903.	1904.	1905.	quennial Period.	
Queensland	 11.88	12.08	12:38	10.11	10.47	11.38	
New South Wales	 11.68	11.95	11.59	10.62	10.13	11.19	
Victoria	 13.22	13.40	12.90	11.92	12.10	12.71	
South Australia	 11.22	11.86	10.79	10.22	10.15	10.85	
Western Australia	 13.36	13.63	12.60	11.91	10.83	12.47	
Tasmania	 10.45	10.90	11.92	11.04	10.13	10.89	
New Zealand	 9.81	10.50	10.40	9.57	9.27	9.91	

It will be noticed that last year the Queensland rate was below that for either Victoria or Western Australia.

Deaths by Districts and Months.

Appendix Table No. XIII. gives full particulars as to month and district of registration of all deaths occurring during 1905. A short summary is appended.

			N.			
771				Males.	Females.	Persons.
	000		0 0 0	 891	523	1,414
Second Quarter				 927	484	1,411
Third Quarter				 838	469	1,307
Fourth Quarter	• • •	•••		 843	528	1,371
Totals				 3,499	2,004	5,503

Of the 1,414 deaths registered in the first quarter, 509 were recorded in January—the greatest number in any month of the year—433 in February, and 472 in March. During the second quarter, 454 were registered in April, 495 in May, and 462 in June. There were only 1,307 deaths reported in the

third quarter, and of them 415 were in July—the smallest monthly return of the year—447 in August, and 445 in September. Of the last quarter, when 1,371 deaths were registered, 426 were in October,

474 in November, and 471 in December.

Passing the Brisbane Registry District where 1,057 deaths were registered, the greatest number of deaths-264-were in Kennedy (Charters Towers), followed by 254 in Moreton East, where the Benevolent Asylum peopled by aged and invalid persons is situated, 243 in Drayton and Toowoomba, 193 each in Enoggera, Ipswich, and Rockhampton, 190 in Gympie, 180 in Townsville, 156 in Cairns, and 155 in Moreton West. In all other districts registrations of death did not exceed 150.

Birthplaces of Persons Who Died.

Information is furnished in Appendix Table No. XV. with respect to birthplaces of all persons dying during 1905. A summary of this is given in the subjoined statement:-

				0.		
			Popu	nal Proportion to Total dation borne by each nality, Census of 1901. Proportion.		esimal Proportion to borne by Deaths of ty, Year 1905. Proportion.
Queensland				57.09	2,280	41.43
Other Australasian S Zealand	States	including	New	8.16	316	5.74
England				13.77	1,084	19.70
Scotland				4.00	326	5.92
Ireland				7:56	733	13.32
Other British Possess	sions			0.82	39	0.71
Germany			•••	2.64	271	4.93
Other Countries of E	urope.			1.59	102	1.85
China				1.70	99	1.80
Pacific Islands				1.77	164	2.98
Elsewhere				0.90	89	1.62
					-	
				100.00	5,503	100.00

Of the 5,503 deaths 2,280 were of natives of this State, comprising 41 per cent. of all deaths; whilst Queenslanders contributed 57 per cent. of the population. The next in number were persons born in England 1,084, or 20 per cent., of the deaths, which ratio is 6 per cent. in excess of the population proportion. Natives of Ireland contributed 733 deaths, or 13 per cent., of the total; their population proportion being 8 per cent. Other large contributors to the mortality were Scotch 326, other Australasians 316, Germans 271, Pacific Islanders 164. Of these the first third and fourth contributed to the death rate in excess of their population proportions.

Occupations of Persons who Died.

The following statement gives a summary of the information contained in Table No. XVI. in the Appendix, and shows by classes the occupations of all persons who died in 1905:-

CLASSES.	YEARS.											
GLASSES.	19	1901.		1902.		003.	19	904.	1905.			
llass I.—Professional	M. 101	F. 22	м. 116	F. 24	M. 97	F. 21	M. 103	F. 16	M. 104	F. 15

"VIII.—Dependants	1,413	1,887	1,334	1,997	1,546	2,042	1,155	1,714	1,216	1,65		
Totals	3,838	2,169	3,924	2,280	3,951	2,395	3,259	1,991	3,499	2,00		
	6,0	007	6,2	204	6,8	346	5,2	250	5,5	503		

The classification adopted is the scheme approved by the International Association of Statisticians, and in the large table in the Appendix the headings are subdivided into orders, thus furnishing the

particulars in much greater detail.

Of the 5,503 deaths 2,867, or 52 per cent., were dependents, consisting mainly of wives, grown up daughters not following any specific calling, inmates of Government Institutions (residential), and all children, and 233, or 4 per cent., of persons of independent means or of indefinite occupation, leaving 2,403 persons, or 44 per cent., earning a livelihood by some definite employment. Of these 119, or 5 per cent. of the workers, were engaged in professional pursuits; 252, or 10 per cent., were either receiving wages or working for themselves in one of the domestic callings; 216, or 9 per cent., were engaged in commerce; 168, or 7 per cent., followed avocations connected with transport and communication; 689, or 29 per cent., were employed in industrial pursuits, chiefly to do with secondary production; whilst 959, or 40 per cent., were occupied in connection with agriculture, mining, and other sources of primary production. Interesting deductions as to the healthiness or otherwise of certain occupations can be drawn from a comparison of the death rates of the various callings, but for this it is, of course, necessary

to have accurate figures as to the numbers engaged in the various employments, and these can only be secured at or soon after each Census enumeration. As the last Census was taken in 1901, any conclusions based on data then collected would now be unreliable.

Mortality of the Metropolitan Area.

Seeing that Brisbane is now a city of such size as to contain the invariable accompaniments of a large aggregation of population, the death rate is an exceedingly low one. The following table shows the mean population, the number of deaths, and the death rate in Greater Brisbane (10-mile radius) for 1905.

Pa.	Estimated Mean Population.	Total Deaths.	Rate per 1,000.
City of South Brickers	37,766 $29,529$	750 307	*19·86 10·40
Brisbane Registry District	67,295	1,057	15.71
Outside Registry District, but within Ten-mile Radius .	60,409	493	8.16
Brisbane Metropolitan Area (Ten-mile Radius). State	127,704 $525,728$	1,550 5,503	12·14 10·47

The rate for the whole area was 12.14 and but for deaths in public institutions, which are to a considerable extent contributed to by a much more extensive population than that contained in greater Brisbane, would have approximated even more closely to the ratio for the whole State, namely, 10.47.

The effect of the two largest institutions on the mortality of the city of Brisbane is seen in the greatly increased death rate in that section of the area and which is reflected in the proportion for the Brisbane Registry District.

The number of deaths during the last ten years in the public institutions situated in the metro-

politan area is given in the following statement:-

					FD.							
	1896.	1897.	1898.	1899.	1900.	1901.	1902.	1903.	1904.		1905

Totals	330	311	376	316	304	388	419	491	399	297	177	474

These 474 deaths constitute 31 per cent. of the total deaths of the whole area. The Hospital for Chronic Diseases, situated in the city of South Brisbane, draws patients from all over the State. If these were allowed for, the death ratio for that municipality, which even thus loaded is a low one, would be materially reduced.

The following table referring to the principal hospitals throughout the State, although dealing with a matter not perhaps strictly within the range of mortality statistics, may yet be of interest to the class of

persons who make use of this report :-

Pc. Number of In-patients Cost of Administration and Management for In-patients. each In-patient HOSPITAL STAFF. Number of In-patient PAID. HONDRARY. Where Situated. Day. Medical. Nursing. Other. Committee. Medical. Cost of e Days. F. M. F. F. F. M. Maryborough Mount Morgan 665 564 16,002 11,680 13 7 7 9 1 489 574 9,429 12,217 6 4 2 427772 5 3,264 3,868 3,775 1,680 17,300 22,188 21,535 Rockhampton Toowoomba Townsville 12 16 5 16 3 3 3 2 2 4 11 8 15 6 12 7 899 Warwick ... 12,220 433

Passing the Children's Hospital, Brisbane, as treating a different class of patient, it is found that the daily cost of each patient ranges from 2s. 9d. at Warwick to 4s. $7\frac{3}{4}$ d. at Mount Morgan.

^{*} The General and Children's Hospitals are in the City of Brisbane. † Appearing for the first time in 1901. ‡ Appearing for the first time in 1902

DEATHS BY AGES.

Infant Mortality.

Restricting this term first to its narrowest definition of what is known as "true infantile mortality," the conditions obtaining here when compared with those elsewhere are eminently satisfactory. The ratios of deaths under 1 year to the total births for the last ten years have been as follow:—

Showing True Infantile Mortality.—Return for Ten Years 1896-1905.

1896.	1897.	1898.	1899.	1900.	1901.	1902.	1903.	1904.	1905.	Mean for the 10 years.
10.46	9.46	11.05	10:94	9.84	10.19	10.02	11.99	7.61	7:55	9.89

The true infantile mortality for 1904 was the lowest up to that time ever experienced in Queensland, whilst the figures for 1905 show a slight improvement even on that ratio. Satisfactory as this is, yet there still seems room for reflection as to why the mortality amongst infants under 1 year should be seven times greater than with persons of all ages. Great improvement with respect to infant mortality has taken place, as may be seen from the following statement:—

			Qa.			
1875	 	12.46		1895	 	11.07
1880	 	12.98		1900	 	10.31
1885	 	13.64		1905	 	9.89
1890		19.65				

During the ten years, 1875-1885, the rate approximated to 13 per cent., whilst during the last ten years it has been fully 2 per cent. lower; but even then, after making every allowance for physical and constitutional frailty of the very young, it seems difficult to avoid the conclusion that there yet remains a wide field of usefulness in this direction.

The following table gives the true infantile mortality in all the States of Australasia for 1905:-

		Qb.		
		9		1905.
Queensland	 		 	 7.55
New South Wales	 		 	 8.06
Victoria	 		 	 8.33
South Australia	 		 	 7.30
Western Australia	 		 	 10.42
Tasmania	 		 	 7.90
New Zealand	 	• • •	 	 6.75

The most favourable experience was that of New Zealand with a ratio of 6.75; then South Australia, 7.30; and Queensland, 7.55; followed by Tasmania, New South Wales, Victoria, and Western Australia in the order named, the last having an infant mortality rate of 10.42.

Although the brunt of infant loss by death is borne by those under 1 year, yet during the second year of life the mortality is still very great. The following table contains information as to deaths of children under 2 and 5 years of age for last year:—

		ni eiii			Dis-	CHILDREN UN	DER 9 VEAL	RS OF AGE	CHILDREN UN	DER 5 VEA	BS OF AGI

All Other				 •••	 2,479	5.12	504	20.33	12.64	580	23.40
Totals				 •••	 5,503	5.08	1,215	22.08	12:54	1,394	25.33

* Includes Charters Towers.

Thus children under 2 comprised at the last Census just 5 per cent. of the total population, the ratio now is certainly a little more, but during 1905, 22 per cent. of all deaths were of children of that age. After attaining 2 years of life, the prospects of surviving rapidly advance, for of those over 2 and under 5,

U

comprising some 7.5 per cent. of the population, their ratio of contribution to the total deaths was 3.25 per cent. only. The districts detailed in the foregoing table contain within their boundaries all the populous towns of the State, and it will be noticed that, although the proportions of children to the populations vary considerably, they do not do so to anything like the same extent as do the deaths. Take Enoggera, a populous western suburb of Greater Brisbane, whilst children under 2 and under 5 comprised, respectively, 5 49 and 13 40 of the population of all ages, the deaths of these ages formed 37 82 and 40 93 of the total deaths, whilst for Mount Morgan the like ratios were to population under 2, 6.93; under 5, 16.74; and for deaths, 35.79 and 37.89. If these two districts had experienced a child mortality in proportion to their child population as satisfactory as that of Townsville—the most favourable district shown in the above table—their death rates would have been: Enoggera, under 2, 15:29; under 5, 21:91; Mount Morgan, under 2, 19:30; under 5, 27:37. This would have meant that only 42 children at Enoggera and 26 children at Mount Morgan would have died, instead of 79 and 36 respectively, or a saving of 37 lives in the former and 10 lives in the latter district during the one year only,

Deaths at each Age Period.

The following table furnishes the best information available on this point and the particulars would at or soon after a Census be practically correct, but as the date of last Enumeration recedes they become less reliable:-

R.

Age Period.	Proportion of P lation at each Period to T Population, Cer 1901.

nspecified	90 m.,			A		0.73	3,838	2	0.52
	Total					100.00	525,728	5,503	10:47

Deaths under 1 year to the estimated mean population at that age were 76 per 1,000, which strangely enough it will be noticed agrees exactly with the similar ratio of the "true infantile mortality, based on the relation of deaths under 1 year to the births, and thus affords confirmation as to the approximate correctness of the estimated mean population at this age, and inferentially, therefore, of the other ages also. The 20 years of life, 5 to 25, comprise 43 per cent. of the population, but contribute only 12 per cent. of the deaths. The first decade of this period embracing 24 per cent. of the population but less than 4 per cent. of the deaths only.

Death Index.

The following table furnishing information on this subject is published to comply with the express desire of the Bureau of International Statistics:-

	Year. Classes of Age.		°/o of Queens- land Population at each Age Period, Census 1901.	Estimated Mean Population.	Number of Deaths.	Coefficient °/o.	°/o of Swedish Population at each Age Period.	Queensland Index °/00.
1905	}	Under 1 year 1 to 20 years 20 to 40 ,, 40 to 60 ,, 60 years and upwards	2·58 43·47 33·19 15·98 4·78	13,564 228,534 174,489 84,011 25,130	1,029 770 1,002 1,168 1,534	7·59 0·34 0·57 1·39 6·10	2·55 39·80 26·96 19·23 11·46	1·93 1·34 1·55 2·67 7·00
-		Totals	100.00	525,728	5,503	1.05	100.00	14.49

This table is designed to correct for comparative purposes the death ratios of all countries on the basis of a common condition with regard to the numbers of the population at each age period. Sweden has been selected by the Bureau as the "fugleman" for this purpose, it being considered that the population of that country is in the most normal condition with respect to age. On the basis of this "Index" it is seen that the death rate for Queensland for 1905 would have been 14:49 per 1,000 of the population had the Swedish conditions with respect to age obtained in this State.

The following table supplies particulars with regard to deaths from 1860 to the end of 1905:-

Age Living. Census Years.	22.97	22-27	23.06	22.70		23.30		23.32		23.60		23.56				24.97		,

This table is a summary for each year mentioned of the particulars which for 1905 will be found in Appendix Tables Nos. XII., XVIII., XIX., XX., and in a compact form gives valuable information as to deaths at each age period. The last two columns are of especial interest, as giving the mean age of persons dying each year, and the mean of all persons alive at each Census. It will be readily seen that, whilst the mean age at death has advanced by some 12 to 15 years, the advance in the average age of persons living has not been nearly as great, due largely to the improved conditions with regard to child mortality.

Causes of Death.

In agreement with the Statistical Conference of 1902, deaths occurring in Queensland are classified with respect to "Cause" in accordance with the scheme adopted by the Registrar-General of England. This is a modification of the Bertillon and Farr systems, but is more closely allied to the former than to the latter, which was the one previously in use. These two methods of classification are shown in juxtaposition in the following table, as for the first two of the five years embraced, the old scheme was in vogue, and for the last three years deaths were classified under the new:—

Table comparing the Percentage which the several Causes of Deaths bear to the Total Deaths in each Year.—Return for the Five Years.

Fuller details respecting the scheme now in use are given at the first page of the Appendix, showing every definition, under one of which each death recorded has to be tabulated. To do this, the cause of death, as furnished on his certificate by the doctor in attendance, has to be carefully scrutinised and classified. For the most part medical men, by the care with which they fill in these documents, render the task an easy one, but in some cases much trouble would be saved to the staff of this Department if the writers of these certificates fully realised that every one of them has to be brought within the four corners of the above scheme of classification, and so selected their verbiage as to leave no doubt as to the line to which the cause of death should be tabulated. In accordance with the foregoing scheme all deaths in the

State are classified to their proper causes by ages, by months, and by districts; tables giving like particulars for the metropolitan area being given in addition. This information is embraced in Tables Nos. XVIII. et seq. in the Appendix.

In the tables relating to ages full particulars are given for each year up to 5 years of age, and thereafter in quinquennial periods up to 75 years, all above that age being entered in one column—75 and upwards; further particulars respecting the exact age of these is given in the following table:—

In 1905 there were 478 deaths of persons over 75 years of age, 278 males and 200 females. The cause assigned for the death of 117 of these was the very indefinite term, old age. Passing these, since the so-called cause possesses no significance from the standpoint of fatality of specific diseases, we find that the most frequent contributory to the death of old people was bronchitis, from which last year 33

succumbed, 19 males and 14 females. Valvular disease and endocarditis were responsible for 32 deaths, dengue for 27, pneumonia for 20, syncope for 19, disease of bladder and prostate 19, apoplexy 18, and malignant disease and cancer 15.

The following statement summarises the ages in the foregoing table:—

					278	200	478

Of the 478 deaths over 75, 50:00 per cent. exactly, died between that age and 80, 28 per cent. between 80 and 85, 17 per cent. between 85 and 90, 4 per cent. between 90 and 95, whilst four persons only survived the latter period of life, aged respectively 95, 96, 98, and 99, the last, the oldest death recorded, was that of a woman who thus just failed to complete the century.

Appendix Tables Nos. XVIII. to the end supply information as to the causes of the 5,503 deaths which were registered during 1905. The following table gives comparative figures with respect to the 17 most fatal of these, both with respect to previous years' mortality and also as regards their relation to the numbers of the population and to the total deaths:—

TC.

RETURN for Three Years showing the Number of Deaths from some of the Principal Causes in the Order of their Degree of Fatality in 1905, also their Proportion per 10,000 of the Total Deaths and per 100,000 of the Mean Population, respectively, for each of the Years 1903-5.

Although in the Appendix tables pulmonary tuberculosis and phthisis are shown on separate though adjoining lines, and carcinomatous troubles when variously designated are shown separately also, yet these have each respectively been brought together in the tables illustrating degree of fatality. Although Professor Von Schron and his supporters express themselves as satisfied that phthisis and pulmonary tuberculosis are distinct diseases, yet so long as medical men here use these terms—as they frequently do—as synonymous, and whilst deaths recorded under them are tabulated in the sub-class devoted to tuberculosis, there seems no sufficient justification for separating them in a consideration of the question of frequency.

Pulmonary tuberculosis—including phthisis (undefined) and all tubercular affections of the respiratory organs and passages—was responsible for 397 deaths in 1905, against 410 in 1904, a decrease last year of 13. This is equivalent to 7.21 per cent. of all deaths, and 0.76 per 1,000 of the population, or 1 death to each 1,324 persons.

It was decided at the last conference of the Statisticians of the States of the Commonwealth to publish annually a statement showing the length of residence in Australia of all persons dying from any form of tuberculosis. This information for Queensland is given in the following tables, and is tabulated in such a way as to distinguish between Australasians, Pacific Islanders, and "others." Moreover, pulmonary and laryngeal tuberculosis are kept distinct from tuberculosis affecting other parts.

The figures contained in these tables hardly confirm the theory that any considerable number of victims to tuberculosis acquire the complaint before arrival in the Commonwealth. Taking Table Td, it will be seen that of the 352 deaths due to pulmonary, &c., phthisis, in which the duration of residence was specified, 221, or 63 per cent., had been more than 20 years in Queensland, 85, or 24 per cent., upwards of 10 years, and 16, or 5 per cent., more than 5 years, few, if any of whom are likely to have been pre-infected. Some of the remaining 8 per cent. had spent all their lives in Australia, but were less than 5 years of age, so that only 27 remain as coming within reasonable possibility as introducers of this dire disease, and these in some instances, no doubt, acquired the complaint within the State.

With respect to Table Te deaths due to other forms of tuberculosis, it would at first appear from the large number—42 out of 81—with less than five years of residence in Queensland, that some colour was given to the idea of the arrival from abroad of sufferers from these phases of this disease, but when it is remembered that tubercular infection of other than the respiratory organs is largely confined to the young, this hypothesis falls to the ground, for of the 42 above mentioned 31 were of children under 5 years of age.

Carcinomatous Diseases.—The increase in the proportion of these affections has been very pronounced during recent years, and they now stand second in the order of degree of fatality. Of the 351 deaths from these diseases shown in Table No. Tc, 134 were returned as due to carcinoma, 23 to sarcoma, and 194 to malignant disease and cancer. The youngest to succumb to carcinoma was 30-35 years old, and to malignant disease, cancer, was between 5 and 10 years of age. Two infants under 1 year and 2 children aged 2 to 3 years died from sarcoma, whilst of the remaining 19 one was a girl of 10 to 15, and the rest were over 20 years. In accordance with the agreement come to by the Hobart Statistical Conference, further details respecting cancer, &c., are furnished in the subjoined table:—

Of the 351 deaths, 196 were of males, and 155 of females, proportions of 6.77 and 6.56 per 10,000 of the mean population of each respectively. The ratio amongst males was, therefore, slightly the higher. In the foregoing table the terms actually employed in the medical certificates have been given, and amalgamation only carried out where the words used were identical. It will be seen that the stomach is the chief of attack in 71 cases—49 male, 22 female—this being the organ affected, besides in 8 instances the stomach in conjunction with some other organ was involved. There were 36 cases of death due to cancer, &c., of the liver—again males greatly in the majority, 23 to 13 females. Probably men are less careful than women as to the treatment they accord to both their stomach and their liver. There were 60 deaths of females due to carcinomatous diseases of the generative and mammary organs, whilst with regard to both sexes the intestines and the head appeared to be a frequent site of attack.

Valvular Disease, Endocarditis.—The increase in the mortality due to these forms of heart disease is rapidly assuming grave proportions. Fifteen years ago, deaths from these causes numbered 11.7 per

1,000 of total deaths; five years later (1895) this proportion had advanced to 31·1, whilst in 1905 they amounted to 45·8 per 1,000 deaths from all causes. After making every allowance for changed or more careful diagnosis, such remarkable increase as is here pourtrayed certainly seems deserving of the fullest investigation.

Gastro Enteritis.—Fortunately, the epidemic of this complaint which was so pronounced a feature of the mortality experience of 1903 was not repeated in the two succeeding years, the 433 deaths then registered being followed in 1904 and 1905 by records of 255 and 250 respectively. Chiefly fatal to the very young—of the 250 deaths last year, 237, or 95 per cent., were under 5 years of age—its attacks are most severe during the summer, or fruit months, 139, or 56 per cent., of the deaths being recorded from December to March inclusive, whilst the registration during July, August, and September numbered only 21. It is also necessary to remember that there were 106 deaths certified as due to enteritis (not epidemic), so that the total number of deaths attributable to these allied complaints was 356.

Malarial Fever, including Dengue.—Malaria is not usually the cause of many deaths in Queensland, but, during 1905, as already pointed out, a severe epidemic of dengue was experienced, and of the 239 tabulated as due to malarial diseases, practically all were from dengue. In 1903, 54, and, in 1904, 37 deaths from these causes were recorded, so that in 1905 there were between six and seven times as many deaths due to malaria as in 1904.

Pneumonia.—In classifying causes of death there is sometimes a little difficulty in discerning which cases of pneumonia are hypostatic or post febrile and which may be properly classified to that cause. The greatest care is, however, exercised and it is believed but few errors are made. There were 228 deaths tabulated to pneumonia in 1905 against 256 in 1903 and 205 in 1904. The ratio per 1,000 deaths last year was 41.4, and per 10,000 of the population 4.3. These proportions have been fairly constant for a number of years. Of the 228 deaths from this cause in 1905, 151 were of males and 77 of females, showing that the former are much more subject to attack than the latter, probably due to their greater liability to exposure. The later winter and earlier spring months comprise the seasons when pneumonia is most prevalent.

Old Age.—Although frequently—too frequently—given as a cause of death, this term can certainly not be considered as describing any specific disease, and certificates so filled in are practically blank from the standpoint of the Statistician. No doubt there are cases in which the medical attendant is unable to detect any specific complaint as causing death, and is compelled to fall back upon "old age" as a reason, but it does not seem probable that in as many as 196 cases last year no better definition was possible, comprising as they do more than 3.6 per cent. of all deaths and that of persons over 60 years numbering 1,532 persons, the deaths of 194, or 13 per cent., had to be classed to this indefinite term. The like number and proportion in 1904 were 111 and 9 per cent. only, figures implying less care in the effort to diagnose specific causes for the deaths of the aged.

Chronic Bright's Disease.—Although the 160 deaths attributed to this disease were 20 below the record for 1903 and only 7 in excess of the number for the following year, whilst the ratio to total deaths was precisely the same for both 1904 and 1905, yet the increase in the victims to this complaint has been too persistent for a number of years to justify conclusions as to improvement based on the experience of one or two years only.

Bronchitis.—There were 153 deaths from bronchitis during 1905, in addition to these and the deaths due to pneumonia, there were a number resulting from specified kinds and combinations of these two complaints—namely, 18 due to lobar and croupous pneumonia, and 65 to broncho, catarrhal, and lobular pneumonia. There were 155 deaths from this cause in 1903, 141 in 1904, and 153 last year. Of the latter 96 were males and 57 females. In common with most troubles of the respiratory system, bronchitis is especially prevalent during the colder portion of the year, although not to so pronounced a degree as with pneumonia.

Premature Birth.—There was a marked diminution in 1905 in the mortality from this cause, 149 deaths against 175 and 171 respectively, in the two immediately preceding years.

Convulsions.—It is most satisfactory to note a marked decrease in the use of this indefinite term, which is really a symptom of several diseases rather than a direct cause of death. The figures for the last three years were, 1903, 177; 1904, 139; and 1905, 116; the latter figure comprising just over 2 per cent. of all deaths.

Enteritis (not Epidemic).—In common with gastro enteritis this disease has been much less fatal during the last two years than in 1903, as only 91 deaths in 1904, and 106 in 1905, were thus certified, against 163 in 1903.

Syncope—Heart Disease (not further specified).—There were 103 deaths in 1905, the causes of which were thus given against 142 in 1903, and 112 in 1904, thus described. It is satisfactory to note that these insufficiently definite terms fell to this extent into disuse. This may, to a slight extent, have contributed to the greater number of deaths recorded to valvular disease, as a result of greater care in diagnosis.

Enteric Fever (more commonly known as Typhoid).—The experience for 1904 and 1905 was more satisfactory than in 1903, the number of deaths being 189 in 1903, 91 in 1904, and 95 last year. As this is a "preventable" disease to perhaps a greater extent than most others, there is still great room for improvement, more particularly as the fatality resulting is but a small measure resulting from typhoid. Improved knowledge and the consequent improved methods of treatment have greatly reduced the mortality, but in its sequelae this complaint leaves a life-long mark on the constitution of many a patient rescued from immediate death.

Without, perhaps, going so far as Dr. Samuel Holkias Adams, one of America's greatest sanitation authorities, "that wherever you find a death from typhoid, someone ought to be hanged for murder," there is no doubt a grave responsibility rests on a community where this cause is in the slightest degree prevalent.

Childbirth.—There were 43 deaths of women, mothers of legitimate children, during 1905, against 69 in 1904. These figures give ratios of 5.26 for 1904 and 3.39 for 1905 to each 1,000 legitimate births. The following table shows the ages and the number of the previous issue of the women dying from this cause in 1905:—

The youngest mother was 20—of which age there were two—and the oldest 49 years of age. In 8 cases the women were *primiparae*, and in two instances the women had already given birth to at least 10 children.

MARINE REGISTRATIONS.

There were no entries of either marine births or deaths during 1905. The few cases which took place on board ship all occurred within the Queensland jurisdiction and were registered according to the district within which they took place.

ADDITIONS TO REGISTERS.

There were 25,475 new names added to the registers last year or just 13 fewer than in 1904. The aggregate number on the registers of the State at the end of 1905 being 811,878.

REGISTRY OFFICE.—RECEIPTS AND EXPENDITURE.

There was a very marked increase in the amount collected by district registrars for fees in connection with the various Acts administered by the Registrar-General's Department last year, namely:—£874 10s. 3d. against £623 1s. 2d. in 1904. Particulars respecting the collections for the past two years are given in the following table:—

U.

Return showing the Amounts received by the District Registrars in the State during the Years 1904 and 1905 respectively, and paid into the General Revenue.

^{*} Paid by salary

A considerable amount of gratuitous work is done for Consular Officers, Government Departments, &c.

THORNHILL WEEDON, F.S.S., Government Statistician.

Government Statistician Office, Brisbane, 29th August, 1906.

[†] Allowed a Clerk at £70 per annum.

CLASS I .- General Diseases.

SUB-CLASS 1.

1. Small-pox.

2. Cow-pox and Effects of Vaccination.

3. Chicken-pox.
4. Measles (Morbilli).
5. Epidemic Rose Rash, German Measles.

6. Scarlet Fever.

7. Typhus. 8. Plague.

9. Relapsing Fever.

10. Influenza.

11. Whooping Cough.

12. Mumps.

12. Mumps.13. Diphtheria, Membranous Croup.14. Cerebro Spinal Fever.15. Simple Continued Fever.

16. Enteric Fever.

17. Beri Beri.

SUB-CLASS 2.

Asiatic Cholera.
 Epid. Diarrhœa, Epid. or Zim. Enteritis.
 Diarrhœa, Choloraic Diarrhœa.

4. Dysentery.

5. Malarial Fever { Dengue. Other.

SUB-CLASS 3.

Hydrophobia.
 Glanders, Farcy.
 Anthrax, Splenic Fever.

4. Tetanus.

SUB-CLASS 4.

1. Syphilis.

2. Gonorrhæa, Stricture of Urethra.

SUB-CLASS 5.

Puerperal Septicæmia, Saprœmia.
 Puerperal Pyæmia.
 Puerperal Phlegmasia Dolens.

4. Puerperal Fever.
 Infective Endocarditis.
 Epidemic Pneumonia, Pneumonic Fever.

7. Erysipelas.

9. Pysmia (not Puerperal).
9. Pysmia (not Puerperal).
10. Phlegmon, Carbuncle (not Anthrax).
11. Phagedena.

12. Other Septic Diseases.

SUB-CLASS 6.

1. Tuberculous Phthisis, Pulm. Tuberculosis.

2. Phthisis.

3. Tuberculous Meningitis.

4. Tuberculous Peritonitis.5. Tabes Mesenterica.

6. Lupus.

7. Tubercle of Other Organs. 8. General Tuberculosis.

9. Scrofula.

SUB-CLASS 7.

1. Hydatids.

2. Ankylostoma.
 3. Other Animal Parasites.

4. Other Parasites.

SUB-CLASS 8.

1. Privation (Starvation, &c.).

2. Scurvy

3. Alcoholism, Delirium Tremens.

Alcoholism, Berlittin Frenchs.
 Opium, Morphia Habit.
 Ptomaine Poisoning.
 Chronic Poisoning (not intentional).
 Industrial Poisoning.

SUB-CLASS 9.

Rheumatic Fever, Acute Rheumatism.
 Rheumatism of the Heart.

3. Chronic Rheumatism.

4. Rheumatic Arthritis, Rheumatic Gout.

5. Gout.

SUB-CLASS 10.

1. Carcinoma.

Sarcoma.

3. Malignant Disease, Cancer.

SUB-CLASS 11.

1. Rickets.

2. Purpura 3. Hæmophilia, Hæmorrhagic Diathesis.

4. Anæmia, Leucocythæmia.
 5. Diabetes Mellitus.

SUB-CLASS 12.

1. Premature Birth. Congenital Defects.
 Injury at Birth.

4. Atelectasis.

5. Want of Breast Milk.

6. Teething.

A

CLASS II.-Local Diseases.

SUB-CLASS 1.—DISEASES OF NERVOUS SYSTEM.

1. Meningitis, Inflammation of Brain.

Mennigles, Inhammation of
 Softening of Brain.
 General Paralysis of Insane.
 Insanity (not Puerperal).

5. Chorea.

6. Epilepsy.7. Convulsions.8. Laryngismus Stridulus.

Laryngismus Stridurus.
 Locomotor Ataxy.
 Paraplegia and Diseases of Cord.
 Neuritis, Periph. and Poly. Neuritis.
 Brain Tumour (not Specific).
 Nervous System, Other Diseases.

SUB-CLASS 2 .- DISEASES OF ORGANS OF SPECIAL SENSE.

1. Otitis, Mastoid Disease.

Epistaxis, Nose Disease.
 Ophthalmia, Eye Disease.

SUB-CLASS 3 .- DISEASE OF HEART.

1. Valve Dis., Endocarditis (not Infective).

Pericarditis.

Hypertrophy of Heart.
 Angina Pectoris.
 Dilitation of Heart.

Fatty Degeneration of Heart.

7. Syncope, Heart Disease (not Specified).

SUB-CLASS 4 .- DISEASES OF BLOOD VESSELS.

1. Cerebral Hæmorrhage, Emb. Throm.

Apoplexy, Hemiplegia.
 Aneurism.

4. Senile Gangrene.

5. Embolism, Thrombosis (not Cerebral).6. Phlebitis.7. Varicose Veins.

8. Blood Vessels, Other Diseases.

SUB-CLASS 5.—DISEASES OF THE RESPIRA-TORY ORGANS.

Larvngitis.

Membranous Laryngitis (not Diphtheritic).

Croup (not Spasmodic or Membranous). Larynx, Other Diseases (not Specified). Bronchitis.

Lobar, Croupous-Pneumonia, Broncho, Catarrhal, Lobular, Pneumonia.

Pneumonia.

Emphysema, Asthma.

10. Pleurisy.11. Fibroid Disease of Lung.12. Respiratory Diseases, Other.

SUB-CLASS 6.—DISEASES OF DIGESTIVE SYSTEM.

Tonsilitis, Quinsy.
 Mouth, Pharynx, Disease (not Specified).
 Gastric Ulcer.

Gastric Catarrh.

Stomach, Other Diseases (not Malignant). Enteritis (not Epidemic). 6.

Gastro Enteritis 8. Appendicitis, Perityphlitis.
9. Hernia.
10. Intestinal Obstruction.

11. Other Diseases of Intestines.
12. Peritonitis (not Puerperal).
13. Cirrhosis of Liver.
14. Liver and Gall Bladder, Other Diseases.
15. Digestive System, Other Diseases.

SUB-CLASS 7 .- LYMPHATIC DISEASES.

1. Spleen Disease.

Spherical Diseases.
 Lymph System, Other Diseases.
 Thyroid Body Disease.

4. Supra Renal Capsules Disease.

SUB-CLASS 8 .- DISEASES OF URINARY SYSTEM.

Nephritis, Acute.

Nephritis, Actue.
 Chronic Bright's Disease, Albuminuria.
 Calculus (not Biliary).
 Bladder and Prostate Disease.
 Urinary System, Other Diseases.

Local Diseases-continued.

SUB-CLASS 9.—DISEASES OF GENERATIVE SYSTEM.

1. Ovarian Tumour (not Malignant).

Ovarian Tumour (not Manghant).
 Other Diseases of Ovary.
 Uterine Tumour (not Malignant).
 Other Diseases of Uterus and Vagina.
 Disorders of Menstruation.

6. Gener. and Mam. Orgs., Other Diseases.

SUB-CLASS 10.—ACCIDENTS OF CHILDBIRTH.

Abortion, Miscarriage.
 Puerperal Mania.
 Puerperal Convulsions.

Placenta Prævia, Flooding.
 Pregnancy, Childbirth, Other Accidents.

SUB-CLASS 11.—DISEASES OF LOCOMOTOR SYSTEM.

Caries, Necrosis.
 Arthritis, Periostitis.

3. Locomotor System, Other Diseases.

SUB-CLASS 12.—SKIN DISEASE.

1. Ulcer, Bedsore.

Eczema.

3. Pemphigus.4. Skin Diseases, Other.

CLASS III.-Other Specified Diseases.

CLASS IV.—Ill-defined and Not Specified Diseases.

Atrophy, Debility.

Old Age. Dropsy, Ascites, Anasarca. 3

4. Tumour. 5. Abscess.

6. Hæmorrhage.

Sudden (Cause unascertained).
 Other Ill-defined Causes.
 Causes not Specified.

CLASS V.-Violent Deaths.

SUB-CLASS 1 .- ACCIDENT OR NEGLIGENCE.

1. In Mines and Quarries.

2. Railways.

Tramways.
 Other Vehicles.

5. Horses, &c.6. Ships, Boats, and Docks (not Drowning).7. Building Operations.

Machinery

9. Weapons and Implements.
10. Burns and Scalds.
11. Poison, Poisonous Vapours.

12. Drowning.

12. Drowning.
13. Suffocation.
14. Falls (Otherwise).
15. Weather—Sunstroke and Heat Apoplexy.
16. Weather—Lightning.
17. Weather—Other.
18. Snake Bites.

19. Insect Bites. 20. Otherwise, or not stated.

SUB-CLASS 2.—HOMICIDE.

3. Justifiable Homicide.

2. Manslaughter.

SUB-CLASS 3 .- SUICIDE. 1. By Poison.

 By Asphyxia.
 By Hanging or Strangulation. 4. By Drowning.

8. By Crushing

5. By Firearms

6. By Cutting Instruments.
7. By Jumping from High Places.

SUB-CLASS 4.

9. By Other Means.

1. Execution.

Note. - The above Classification is based on the system adopted by the Registrar-General of England.

^{*} Excess of Arrivals over Departures; Complete figures not available.

- Excess of Departures.

- Excess of Persons: the estimate has therefore been corrected by taking the Census Population with 1½ per cent. added for non-collection as the basis, and deducting therefrom the increase by excess of Births over Departures by Sea between the 1st January and 3rd of April, 1881, which gives the corrected estimate marked §.

† This estimate exceeded the Population, as ascertained by the Census taken on the 1st May, 1886, by 1,106 Males, 2,937 Females, or 4,063 Persons; the estimate has therefore been corrected by taking the Census Population with 2½ per cent. added for non-collection as the basis, and deducting therefrom the increase by excess of Births over Deaths and excess of Arrivals over Departures by Sea between the 1st January and the 1st of May, 1886, which gives the corrected estimate marked ¶.

**This estimate exceeded the Population, as ascertained by the Census taken on the 1st May, 1896, by 1,106 Males, 1,078 Females, or 12,446 Persons; the estimate has therefore been corrected by taking the Census Population with 2½ per cent. added for non-collection as the basis, and deducting therefrom the increase by excess of Births the setimate exceeded the Population, as ascertained by the Census taken on the 1st May, 1896, Males, 1,078 Females, or 12,446 Persons; the estimate has therefore been corrected by taking the Census Population with 2½ per cent. added for non-collection as the basis, and deducting therefrom the increase by excess of Births over Departures by Sea and by Rail between the 1st January and the 5th April, 1891, which gives the corrected estimate marked §§4.
